DETAILED ACTION

Interference

I. The Applicants filed a "Response to Non-Final Action" on November 17, 2008, where they argued about the written description presented in the 35 USC §112, (first paragraph) Non-Final rejection mailed out July 15, 2008.

However, after thorough examination, the Examiner finds the arguments presented in the "Response" moot in light that the "key element" (as shown in the rejection below) of the "reason of allowance" of the invention of Doroshenko et al. (US Patent No. 6,683,300 B2), which is the patent against which the Interference is suggested, is missing from the Specification of the applicant's application, his parent application, or his provisional application. Doroshenko et al., however, specifically disclose this "key element" in all of their independent claims and within the Specification. In addition the title of the Applicant's Application (AMBIENT PRESSURE MATRIX-ASSISTED LASER DESORPTION IONIZATION (MALDI) APPARATUS AND METHOD OF ANALYSIS) is not conducive to disclose "...without additional matrix".

Therefore, the rejection remains against the applicant's claims and is repeated below:.

Claim Rejections - 35 USC § 112.

2. The following is a quotation of the first paragraph of 35U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 34-80 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the

Art Unit: 2881

art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

With respect to the independent claims 34, 51, and 65, the key element of these claims being: "...irradiating a liquid volume of said analyte solution, without additional matrix added to said analyte solution" has not been found in the Specification of this Application (10/806,829), in the Parent Application (09/146,817)(now US Patent 6,849,847), or the Provisional Application (60/089,088).

Upon review and consideration of the claims, which are found not to be patentable, it is determined that an interference will not be suggested at this time since examination is not yet completed. See 37 C.F.R. §41.102.

Conclusion

4. All claims are drawn to the same invention claimed in the application prior to the entry of the submission under 37 CFR 1.114 and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the application prior to entry under 37 CFR 1.114. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action after the filing of a request for continued examination and the submission under 37 CFR 1.114. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period

Art Unit: 2881

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
